CLAIMS

What is claimed is:

1	1.	A method of providing solutions to problems, the method comprising the steps of:
2		generating problem definitions for problems;
3		receiving environmental information required for generating solutions for
4		the problems;
5		generating solutions for the problems dependent upon the environmental
6		information and the problem definitions;
7		communicating solutions to clients before the solutions are needed.
1	2.	The method of claim 1 wherein the problem definitions are for problems related
2		to securities trading.
1	3.	The method of claim 1 further comprising storing the problem definitions in
2		problem definition records in a database.
3		
1	4.	The method of claim 1 further comprising storing the solutions in solutions
2		records in the database.
1	5.	The method of claim 4 wherein the solutions records have at least one relation to
2		the problem definition records.
1	6.	The method of claim 4 further comprising retrieving at least one solution from the
2		solutions records in the database.
1	7.	The method of claim 1 wherein at least one client is a broker-dealer computer
2		system programmed and operated to effect securities trading.

1	8.	The method of claim 1 wherein received environmental information changes, the
2		method further comprising the steps of:
3		generating additional solutions dependent upon the changed
4		environmental information and the problem definitions; and
5		communicating additional solutions to clients before the additional
6		solutions are needed.
1	9.	The method of claim 1 wherein problems are categorized according to type.
1	10.	The method of claim 9 further comprising generating subscriptions for solutions,
2		the subscriptions comprising relations between clients and types of problems.
1	11.	The method of claim 10 further comprising submitting a request for a
2		subscription.
3		
1	12.	The method of claim 11 further comprising creating a subscription record in
2		response to the submission of the request for a subscription.
1	13.	The method of claim 12 wherein the subscription record comprises data elements
2		identifying a client and a problem type.
1	14.	The method of claim 12 further comprising creating at least one problem
2		definition record dependent upon problem definition rules.
1	15.	The method of claim 14 wherein the problem record comprises data elements
2		identifying problem type, side, symbol, and quantity.
1	16.	The method of claim 15 wherein receiving environmental information comprises
2		receiving market information in the form of quotes, the quotes comprising data
3		elements further comprising side, symbol, quantity, market, and a tag.

- 1 17. The method of claim 16, wherein a quote is received, wherein the quote tag does 2 not indicate that the quote is closed, the method further comprising finding a 3 problem definition record having the same side and symbol as the quote.
- The method of claim 17 further comprising searching for a solution record having the same problem type, side, and symbol as the problem definition record having the same side and symbol as the quote and the same market as the quote.
- 1 19. The method of claim 18 wherein the solution record is found, the method further comprising updating the solution record with the price from the quote.
- The method of claim 18 wherein the solution record is not found, the method further comprising creating a new solution record having the same problem type, side, and symbol as the problem definition record having the same side and symbol as the quote, the same market as the quote, and the same price as the quote.
- The method of claim 16, wherein a quote is received, wherein the quote tag indicates that the quote is closed, the method further comprising deleting solution records having the same side, symbol, and market as the quote.
- The method of claim 14 further comprising repeatedly finding a subscription record so that each existing subscription record is found in turn.
- The method of claim 22, wherein at least one subscription record is found, the method further comprising finding, for each found subscription record, a related record of data communications parameters for the client identified in the found subscription record.
- The method of claim 23 further comprising finding, for each found subscription record, at least one related problem definition record.

- The method of claim 24, wherein at least one problem definition record is found, the method further comprising finding, for each found problem definition record, at least one related solution record.
- The method of claim 25 further comprising communicating, dependent upon data communication parameters identified in the found record of data communications parameters, to the client identified in the found subscription record at least one data element of the found solution record.
- The method of claim 1 in which communicating solutions to clients comprises communicating solutions to an order processing system on a broker-dealer computer.
- 1 28. The method of claim 27 further comprising receiving at least one customer order.
- The method of claim 28 wherein the customer order comprises data elements identifying symbol, quantity, and optionally, price, market, and order type.
- 1 30. The method of claim 29 wherein the customer order type has a relation to the problem type.
- The method of claim 28 further comprising finding at least one solution record having the same symbol as the received customer order and also having a problem type related to the customer order type in the received customer order.
- The method of claim 31 further comprising sending to at least one market at least one solution order, the solution order being dependent upon the customer order and the data in the solution record.

scaled.

1	33.	The method of claim 31 further comprising sending to at least one market at least
2		one solution order, the solution order comprising the side, symbol, quantity, price,
3		and market data elements from the found solution record.
	2.4	the state of the state of the second state of
1	34.	A method of providing solutions for trading securities, the method comprising the
2		steps of:
3		receiving a level-two quote, the level-two quote comprising a symbol and
4		at least one market participant quote, the market participant quote
5		further comprising a quote price, a quote quantity, a quote MPID,
6		and a quote side;
7		creating in computer memory a solution set comprising at least one
8		solution record corresponding to each market participant quote in
9		the level-two quote, the solution record comprising a solution
10		symbol, a solution side, a solution MPID, a solution price, a
11		solution quantity, and a solution latency, the solution latency
12		comprising a latency for the market identified by the solution
13		MPID; and
14		sending the solution set to at least one client.
1	35.	The method of claim 34, wherein the client comprises an automated system for
2		trading securities, the method further comprising the steps of:
3		storing the sent solution set in computer memory in the client system;
4		using at least one of the sent solution records to create orders for
5		securities; and
6		deleting from computer memory the used solution records.
1	26	The method of claim 35 wherein the client comprises more than one automated
1	36.	
2		system for trading securities and the automated systems for trading securities are

4

5

6

1

2

3

4

1

2

3

4

- The method of claim 34 wherein creating a solution set further comprises recording in the solution record the solution side derived from the quote side, the solution MPID derived from the quote MPID, the solution price derived from the quote price, and the solution symbol derived from the symbol in the level-two quote.
- The method of claim 34 wherein creating a solution set further comprises the steps of:

calculating the solution quantity for the solution record dependent upon the quote quantity and dependent upon a hidden quantity ratio for the market identified by the solution MPID; and recording the solution quantity in the solution record.

- 39. The method of claim 38 wherein the hidden quantity ratio comprises a running average of the ratios of order fill quantity to quote quantity, the order fill quantity and the quote quantity being derived from trade data comprising descriptions of executions of orders for securities.
- 40. The method of claim 38 wherein the hidden quantity ratio comprises a decaying average of the ratios of order fill quantity to quote quantity, the order fill quantity and the quote quantity being derived from trade data comprising descriptions of executions of orders for securities.
- The method of claim 38 wherein the hidden quantity ratio comprises a ratio of an order fill quantity to a quote quantity, the order fill quantity and the quote quantity being derived from trade data comprising descriptions of executions of orders for securities.
- The method of claim 34, wherein the solution set comprises at least two solution records, the method further comprising sorting the solution records to yield sorted solution records.

The method of claim 42 further comprising sorting the solution records according 43. 1 to side. 2 The method of claim 42 further comprising sorting the solution records according 44. 1 to price. 2 The method of claim 42 further comprising sorting the solution records according 45. 1 to latency. 2 The method of claim 42 further comprising sorting the solution records according 46. 1 to price and latency. 2 The method of claim 42 further comprising sorting the solution records according 47. 1 to side, price, and latency. 2 The method of claim 42 further comprising deleting solution latency from the 1 48. sorted solution records. 2 The method of claim 34 further comprising creating an index for the solution set. 49. 1 The method of claim 34 wherein the solution record further comprises a type 50. 1 code. 2 The method of claim 34 wherein latency comprises the difference between the 51. 1 time when a broker-dealer receives from a market a response to an order and the 2 time when the order was sent to the market. 3 A system for providing solutions to problems, the system comprising: 52. 1 means for generating problem definitions for problems; 2 means for receiving environmental information required for generating 3 solutions for the problems; 4

5		means for generating solutions for the problems dependent upon the
6		environmental information and the problem definitions;
7		means for communicating solutions to clients before the solutions are
8		needed.
1	53.	The system of claim 52 wherein the problem definitions are for problems related
2		to securities trading.
1	54.	The system of claim 52 further comprising means for storing the problem
2	•	definitions in problem definition records in a database.
2		
1	55.	The system of claim 52 further comprising means for storing the solutions in
2		solutions records in the database.
1	56.	The system of claim 55 wherein the solutions records have at least one relation to
2		the problem records.
1	57.	The system of claim 55 further comprising means for retrieving at least one
2		solution from the solutions records in the database.
1	58.	The system of claim 52 wherein at least one client is a broker-dealer computer
2		system programmed and operated to effect securities trading.
1	59.	The system of claim 52 wherein received environmental information changes, the
2		system further comprising:
3		means for generating additional solutions dependent upon the changed
4		environmental information and the problem definitions; and
5		means for communicating additional solutions to clients before the
6		additional solutions are needed.

- 1 60. The system of claim 52 wherein problems are categorized according to type.
- The system of claim 60 further comprising means for generating subscriptions for solutions, the subscriptions comprising relations between clients and types of problems.
- 1 62. The system of claim 61 further comprising means for submitting a request for a subscription.
- 1 63. The system of claim 62 further comprising means for creating a subscription record in response to the submission of the request for a subscription.
- 1 64. The system of claim 63 wherein the subscription record comprises data elements 2 identifying a client and a problem type.
- The system of claim 63 further comprising means for creating at least one problem definition record dependent upon problem definition rules.
- The system of claim 65 wherein the problem record comprises data elements identifying problem type, side, symbol, and quantity.
- The system of claim 66 wherein means for receiving environmental information comprises means for receiving market information in the form of quotes, the quotes comprising data elements further comprising side, symbol, quantity, market, and a tag.
- The system of claim 67, wherein a quote is received, wherein the quote tag does not indicate that the quote is closed, the system further comprising means for finding a problem definition record having the same side and symbol as the quote.

2

3

- The system of claim 68 further comprising means for searching for a solution record having the same problem type, side, and symbol as the problem definition record having the same side and symbol as the quote and the same market as the quote.
- The system of claim 69 wherein the solution record is found, the system further comprising means for updating the solution record with the price from the quote.
- The system of claim 69 wherein the solution record is not found, the system
 further comprising means for creating a new solution record having the same
 problem type, side, and symbol as the problem definition record having the same
 side and symbol as the quote, the same market as the quote, and the same price as
 the quote.
 - 72. The system of claim 67, wherein a quote is received, wherein the quote tag indicates that the quote is closed, the system further comprising means for deleting solution records having the same side, symbol, and market as the quote.
- The system of claim 65 further comprising means for repeatedly finding a subscription record so that each existing subscription record is found in turn.
- The system of claim 73, wherein at least one subscription record is found, the system further comprising means for finding, for each found subscription record, a related record of data communications parameters for the client identified in the found subscription record.
- The system of claim 74 further comprising means for finding, for each found subscription record, at least one related problem definition record.

- The system of claim 75, wherein at least one problem definition record is found, the system further comprising means for finding, for each found problem definition record, at least one related solution record.
- The system of claim 76 further comprising means for communicating, dependent upon data communication parameters identified in the found record of data communications parameters, to the client identified in the found subscription record at least one data element of the found solution record.
- The system of claim 52 wherein means for communicating solutions to clients comprises means for communicating solutions to an order processing system on a broker-dealer computer.
- The system of claim 78 further comprising means for receiving at least one customer order.
- 1 80. The system of claim 79 wherein the customer order comprises data elements 2 identifying symbol, quantity, and optionally, price, market, and order type.
- 1 81. The system of claim 80 wherein the customer order type has a relation to the 2 problem type.
- The system of claim 79 further comprising means for finding at least one solution record having the same symbol as the received customer order and also having a problem type related to the customer order type in the received customer order.
- 1 83. The system of claim 82 further comprising means for sending to at least one
 2 market at least one solution order, the solution order being dependent upon the
 3 customer order and the data in the solution record.

1	84.	The system of claim 82 further comprising means for sending to at least one
2		market at least one solution order, the solution order comprising the side, symbol,
3		quantity, price, and market data elements from the found solution record.
1	85.	A system for providing solutions for trading securities, the system comprising:
2		means for receiving a level-two quote, the level-two quote comprising a
3		symbol and at least one market participant quote, the market
4		participant quote further comprising a quote price, a quote
5		quantity, a quote MPID, and a quote side;
6		means for creating in computer memory a solution set comprising at least
7		one solution record corresponding to each market participant quote
8		in the level-two quote, the solution record comprising a solution
9		symbol, a solution side, a solution MPID, a solution price, a
10		solution quantity, and a solution latency, the solution latency
11		comprising a latency for a market identified by the solution MPID
12		and
13		means for sending the solution set to at least one client.
1	86.	The system of claim 85, wherein the client comprises an automated system for
2		trading securities, the system further comprising:
3		means for storing the sent solution set in computer memory in the client;
4		means for creating, from at least one of the sent solution records, an order
5		for securities, wherein creating an order from the sent solution
6		record further comprises creating a used solution record; and
7		means for deleting from computer memory the used solution record.
1	87.	The system of claim 85 wherein the client comprises more than one automated
2		system for trading securities and the automated systems for trading securities are
3		scaled.
1	88.	The system of claim 85 wherein means for creating a solution set further
2		comprises means for recording in the solution record the solution side derived

3		from the quote side, the solution MPID derived from the quote MPID, the
4		solution price derived from the quote price, and the solution symbol derived from
5		the symbol in the level-two quote.
1	89.	The system of claim 85 wherein means for creating a solution set further
2		comprises:
3		means for calculating the solution quantity for the solution record
4		dependent upon the quote quantity and dependent upon a hidden
5		quantity ratio for the market identified by the solution MPID; and
6		means for recording the solution quantity in the solution record.
1	90.	The system of claim 89 wherein the hidden quantity ratio comprises a running
2		average of the ratios of order fill quantity to quote quantity, the order fill quantity
3		and the quote quantity being derived from trade data comprising descriptions of
4		executions of orders for securities.
1	91.	The system of claim 89 wherein the hidden quantity ratio comprises a decaying
2		average of the ratios of order fill quantity to quote quantity, the order fill quantity
3		and the quote quantity being derived from trade data comprising descriptions of
4		executions of orders for securities.
1	92.	The system of claim 89 wherein the hidden quantity ratio comprises a ratio of an
2		order fill quantity to a quote quantity, the order fill quantity and the quote quantity
3		being derived from trade data comprising descriptions of executions of orders for
4		securities.

The system of claim 85, wherein the solution set comprises at least two solution records, the system further comprising means for sorting the solution records to yield sorted solution records.

- 1 94. The system of claim 93 further comprising means for sorting the solution records according to side.
- 1 95. The system of claim 93 further comprising means for sorting the solution records according to price.
- 1 96. The system of claim 93 further comprising means for sorting the solution records according to latency.
- 1 97. The system of claim 93 further comprising means for sorting the solution records according to price and latency.
- 1 98. The system of claim 93 further comprising means for sorting the solution records according to side, price, and latency.
- The system of claim 93 further comprising means for deleting solution latency from the sorted solution records.
- 1 100. The system of claim 85 further comprising means for creating an index for the solution set.
- 1 101. The system of claim 85 wherein the solution record further comprises a type code.
- 1 102. The system of claim 85 wherein solution latency comprises the difference 2 between the time when a broker-dealer receives from a market a response to an 3 order and the time when the order was sent to the market.

	1	103.	A solutions server comprising.
	2		a processor coupled to at least one source of environmental information
	3		and coupled to at least one client, the processor programmed to:
	4		generate problem definitions for problems;
	5		receive environmental information required for generating
	6		solutions for the problems;
	7		generate solutions for the problems dependent upon the
	8		environmental information and the problem definitions; and
	9		communicate solutions to clients before the solutions are needed;
	10		and
i	11		a memory coupled to the processor, the processor programmed to store in
	12		the memory problem definitions and solutions.
	1	104.	The solutions server of claim 103 wherein the problem definitions are for
	2		problems related to securities trading.
	1	105.	The solutions server of claim 103 further comprising computer memory in which
	2		is stored the problem definitions.
	1	106.	The solution server of claim 105 wherein the problem definitions stored in
	2		computer memory are stored in the form of problem definitions records in a
	3		database.
	1	107.	The solutions server of claim 103 further comprising computer memory in which
	2		is stored the solutions.
	1	108.	The solutions server of claim 107 wherein the solutions stored in computer
	2		memory are stored in the form of solutions records in a database.

- The solutions server of claim 108 wherein the processor is further programmed to 109. 1 retrieve at least one solution record from the solutions records in the database. 2 The solutions server of claim 103 wherein at least one client is a broker-dealer 110. 1 computer system programmed and operated to effect securities trading. 2 The solutions server of claim 103 wherein problems are categorized according to 111. 1 2 type. The solutions server of claim 111 wherein the processor is further programmed to 1 112. generate subscriptions for solutions. 2 The solutions server of claim 112 wherein the subscriptions comprise relations 113. 1 between clients and types of problems. 2 The solutions server of claim 113 wherein the client has the capability of 1 114. submitting to the processor a request for a subscription. 2 The solutions server of claim 114 wherein the processor is further programmed to 1 115. create a subscription record in response to the submission of the request for a 2 subscription. 3 The solutions server of claim 115 wherein the subscription record comprises data 116. 1
- elements identifying a client and a problem type. 2
- The solutions server of claim 115 wherein the processor is further programmed to 117. 1 create at least one problem definition record dependent upon problem definition 2 3 rules.
- The solutions server of claim 117 wherein the problem definition record 118. 1 comprises data elements identifying problem type, side, symbol, and quantity. 2

2

3

6

- 1 119. The solutions server of claim 117 wherein environmental information comprises
 2 market information in the form of quotes, the quotes further comprising data
 3 elements identifying side, symbol, quantity, market, and a tag.
- 1 120. The solutions server of claim 119, wherein a quote is received, wherein the quote
 2 tag does not indicate that the quote is closed, the processor being further
 3 programmed to find a problem definition record having the same side and symbol
 4 as the quote.
- 1 121. The solutions server of claim 120 wherein the processor is further programmed to 2 search for a solution record having the same problem type, side, and symbol as 3 the problem definition record having the same side and symbol as the quote and 4 the same market as the quote.
 - 122. The solutions server of claim 121, wherein the solution record is found, the processor being further programmed to update the solution record with the price from the quote.
- The solutions server of claim 122, wherein the solution record is not found, the processor being further programmed to create a new solution record having the same problem type, side, and symbol as the problem definition record having the same side and symbol as the quote, the same market as the quote, and the same price as the quote.
- 1 124. The solutions server of claim 123, wherein a quote is received, wherein the quote
 2 tag indicates that the quote is closed, the processor being further programmed to
 3 delete solution records having the same side, symbol, and market as the quote.

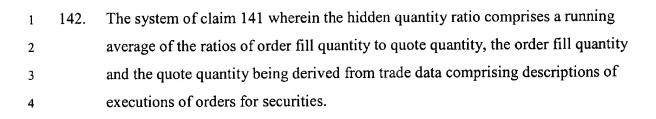

2

3

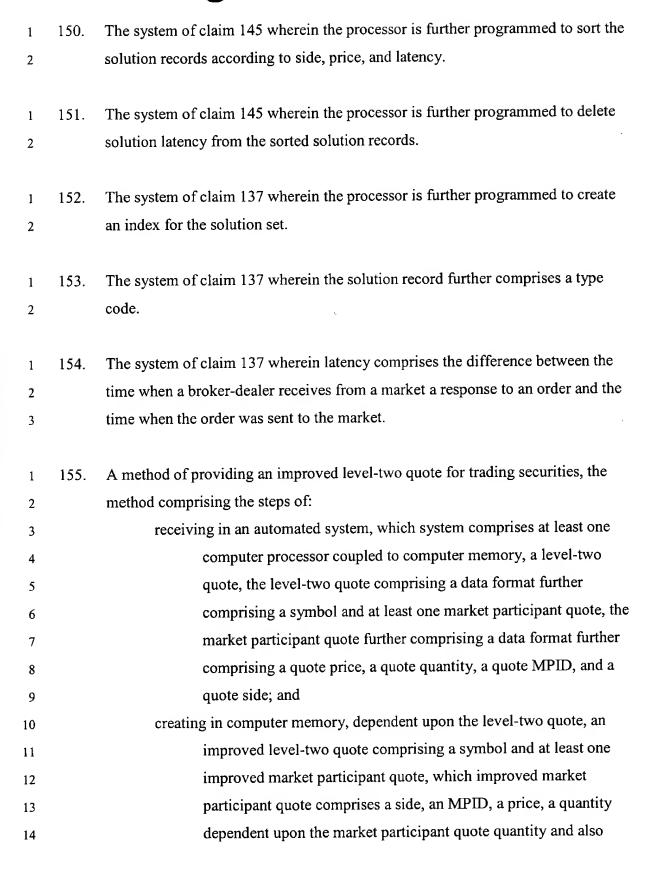

- 1 125. The solutions server of claim 117 wherein the processor is further programmed to 2 repeatedly find a next subscription record so that each existing subscription record 3 is found in turn.
- 1 126. The solutions server of claim 125, wherein at least one subscription record is
 2 found, the processor being further programmed to find, for each found
 3 subscription record, a related record of data communications parameters for the
 4 client identified in the found subscription record.
- 1 127. The solutions server of claim 126 wherein the processor is further programmed to
 2 find, for each found subscription record, at least one related problem definition
 3 record.
 - 128. The solutions server of claim 127, wherein at least one problem definition record is found, the processor being further programmed to find, for each found problem definition record, at least one related solution record.
- The solutions server of claim 128, wherein a data communications parameters record is found, wherein the processor is further programmed to communicate, dependent upon data communication parameters identified in the found record of data communications parameters, to the client identified in the found subscription record at least one data element of the found solution record.
- 1 130. The solutions server of claim 103 wherein the processor programmed to
 2 communicate solutions to clients further comprises the processor programmed to
 3 communicate solutions to at least one order processing system on a broker-dealer
 4 computer.
- 1 131. The solutions server of claim 130 wherein the processor is further programmed to receive at least one customer order.

1 2 3	132.	The solutions server of claim 131 wherein the customer order comprises data elements identifying symbol, quantity, and optionally, price, market, and order type.
1 2	133.	The solutions server of claim 132 wherein the customer order type has a relation to a problem type.
1 2 3 4	134.	The solutions server of claim 133 wherein the processor is further programmed to find at least one solution record having the same symbol as the received customer order and also having a problem type related to the customer order type in the received customer order.
1 2 3	135.	The solutions server of claim 134 wherein the processor is further programmed to send to at least one market at least one solution order, the solution order being dependent upon the customer order and the data in the solution record.
1 2 3 4	136.	The solutions server of claim 135 wherein the processor is further programmed to send to at least one market at least one solution order, the solution order comprising the side, symbol, quantity, price, and market data elements from the found solution record.
1 2 3 4 5 6 7	137.	A system for providing solutions for trading securities, the system comprising: a processor coupled to at least one source of quotes and coupled to at least one client, the processor programmed to: receive at least one level-two quote, the level-two quote comprising a symbol and at least one market participant quote, the market participant quote comprising a quote price, a quote quantity, a quote MPID, and a quote side; create a solution set comprising at least one solution record
8 9 10		create a solution set comprising at least one solution record corresponding to each market participant quote, the solution record comprising a solution symbol, a solution

11		side, a solution MPID, a solution price, a solution quantity,
12		and a solution latency, the solution latency comprising a
13		latency for the market identified by the solution MPID; and
14		send the solution set to a client; and
15		a memory coupled to the processor, the processor programmed to store the
16		solution set in the memory.
1	138.	The system of claim 137, wherein the client comprises an automated system for
2		trading securities, the system further comprising a client processor coupled to
3		client memory, the client processor programmed to:
4		store the sent solution set in client memory;
`- 5		create, dependent upon the sent solution records, orders for securities; and
6		send the orders for securities to markets.
1	139.	The system of claim 137 wherein the client comprises more than one automated
2		system for trading securities and the automated systems for trading securities are
3		scaled.
1	140.	The system of claim 137 wherein the processor is further programmed to record
2		in the solution set the solution side derived from the quote side, the solution
3		MPID derived from the quote MPID, the solution price derived from the quote
4		price, and the solution symbol derived from the symbol in the level-two quote.
1	141.	The system of claim 137 wherein the processor is further programmed to:
2		calculate the solution quantity dependent upon the quote and dependent
3		upon a hidden quantity ratio; and
4		record the solution quantity in the solution record.
5		

- 1 143. The system of claim 141 wherein the hidden quantity ratio comprises a decaying
 2 average of the ratios of order fill quantity to quote quantity, the order fill quantity
 3 and the quote quantity being derived from trade data comprising descriptions of
 4 executions of orders for securities.
- 1 144. The system of claim 141 wherein the hidden quantity ratio comprises a ratio of an order fill quantity to a quote quantity, the order fill quantity and the quote quantity being derived from trade data comprising descriptions of executions of orders for securities.
- 1 145. The system of claim 137, wherein the solution set comprises at least two solution 2 records, the processor being further programmed the solution records to yield a 3 sorted solution set.
- 1 146. The system of claim 145 wherein the processor is further programmed to sort the solution records according to side.
- 1 147. The system of claim 145 wherein the processor is further programmed to sort the solution records according to price.
- 1 148. The system of claim 145 wherein the processor is further programmed to sort the solution records according to latency.
- 1 149. The system of claim 145 wherein the processor is further programmed to sort the solution records according to price and latency.

- dependent upon a hidden quantity ratio, and a latency, the latency
 comprising a latency for the market identified by the MPID; and
 providing the improved level-two quote to clients.
- 1 156. The method of claim 155 wherein the improved level-two quote comprises at least
 2 two improved market participant quotes and the improved market participant
 3 quotes are sorted.
 - 157. The method of claim 155 wherein providing the improved level-two quote to clients comprises providing improved level-two quotes to clients in the form of streaming serial data provided by use of means for data communications.
